Projects

E-Commerce Data Engineering Platform

- Architected an end-to-end **ETL pipeline** processing **10K+ transactions**, simulating real-world e-commerce analytics workflows.
- Engineered real-time data ingestion using **Python and Kafka**, achieving low latency (<200ms).
- Optimized transformation workflows using **dbt and DuckDB**, improving query performance by **25%**.
- Developed **Streamlit dashboards** for KPI tracking, customer analytics, and conversion funnel insights.
- Implemented orchestration and validation using **Apache Airflow and Great Expectations**.

EDU SUB (Assignment Management System)

- Developed a scalable full-stack application using **React.js**, **Spring Boot**, and **Hibernate**.
- Designed and implemented **RBAC system** improving security and user access control.
- Managed structured data using **PostgreSQL/MySQL**, ensuring optimized query performance.
- Deployed application using **Vercel** and maintained CI/CD workflows with GitHub.
